Abstract

SmartBuy - AI Based Personalized Shopping Project Description:

SmartBuy – AI Based Personalized Shopping is an intelligent shopping platform that uses Artificial Intelligence to provide personalized product recommendations based on user preferences, browsing behavior, and purchase history. The system analyzes customer data to understand individual interests and suggest relevant products, helping users make faster and better purchasing decisions. It can also improve the shopping experience through personalized search, product categorization, and recommendations. By combining AI with an easy-to-use shopping interface, SmartBuy aims to reduce product-search time, increase customer satisfaction, and provide a smarter and more efficient online shopping experience.
